INNOVATION IN INTERFACE

## PR1 Relay Base for:

## - Relays With SPDT or DPDT Contacts <br> - Solid-State Relays With the Same Structure

## Universal Modular System

The 15 mm ( 0.591 in .) wide PR1 relay base range is a modular system consisting of PR1-B... relay bases, compact electromechanical relays with SPDT or DPDT contacts, solid-state relays, and a comprehensive range of accessories. These include:

- Plug-in input/interference suppression modules
- Relay retaining bracket with labeling field and eject function
- Labels
- Continuous jumpers

Depending on the application, complete coupling relays can be created, which are optimized in terms of cost, function, and service life.

## Base Versions

The relay bases are available in two versions with screw connections ${ }^{3}$ ) - the flat 2/2 level PR1-BSC2 and the "logical" $1 / 3$ level PR1-BSC3. The second version has coil and contact connections that are located opposite one another and thus meets the requirements of modern control cabinet concepts with clear isolation of control signals and load. Both bases can be extended in terms of functions through the use of keyed plug-in modules with various display and interference suppression elements.

## Cost-Effective Electromechanical Relays

Powerful and cost-effective REL-MR electromechanical miniature power relays are recommended for standard applications. They are available in the following versions:

- With one 16 A PDT contact
- With two 8 A PDT contacts
- In all popular AC and DC coil voltages
- In power contact and gold contact versions

Additional suitable standard and special relays (e.g., for lamp loads) are available on request ${ }^{4}$ ).

## Alternative: Wear-Resistant Solid-State Relays

In critical applications, electromechanical relays reach their maximum service life relatively quickly. This is why, as an alternative, PR1-B... bases can be fitted with OPT wear-resistant solid-state relays with the same structure. These relays provide optimum service life for applications with a high switching frequency and/or for switching high DC loads.

${ }^{1}$ ) The maximum electrical data is relay dependent.
${ }^{2}$ ) Details on request.
${ }^{3}$ ) Spring-cage connections on request.
${ }^{4}$ ) See INTERFACE catalog.
