| LED Current to operate | 2 | mA |

## Features

- Designed for use in security systems complying with EN50130-4
- Only $2 m A$ of LED current required to operate
- Small 4-Pin SOP Package
- TTL/CMOS Compatible input
- 100\% Solid State
- High Reliability
- Arc-Free With No Snubbing Circuits
- $1500 \mathrm{~V}_{\text {rms }}$ Input/Output Isolation
- No EMI/RFI Generation
- Immune to radiated EM fields
- SMD Pick \& Place, Wave Solderable
- Tape \& Reel Version Available

## Applications

- Security
- Passive Infrared Detectors (PIR)
- Data Signalling
- Sensor Circuitry
- Instrumentation
- Multiplexers
- Data Acquisition
- Electronic Switching
- I/O Subsystems
- Meters (Watt-Hour, Water, Gas)
- Medical Equipment—Patient/Equipment Isolation
- Aerospace
- Industrial Controls

## Description

The CPC1002N is a miniature, normally open (1-Form-A) DC solid state relay in a 4-Pin SOP package that employs optically coupled MOSFET technology to provide $1500 \mathrm{~V}_{\text {rms }}$ of input to output isolation. The super-efficient MOSFET switches and photovoltaic die use IXYS Integrated Circuits Division's patented OptoMOS architecture. The optically coupled output is controlled by the input's highly efficient GaAIAs infrared LED.

The CPC1002N uses IXYS Integrated Circuits Division's state of the art double-molded vertical construction packaging to produce one of the world's smallest relays. The CPC1002N offers board space savings of at least 20\% over the competitor's larger 4-Pin SOP relay.

## Approvals

- UL Recognized Component: File E76270
- CSA Certified Component: Certificate 1175739
- EN/IEC 60950-1 Certified Component: TUV Certificate B 090749410004

## Manufacturing Information

Moisture Sensitivity

All plastic encapsulated semiconductor packages are susceptible to moisture ingression. IXYS Integrated Circuits Division classified all of its plastic encapsulated devices for moisture sensitivity according to the latest version of the joint industry standard, IPC/JEDEC J-STD-020, in force at the time of product evaluation. We test all of our products to the maximum conditions set forth in the standard, and guarantee proper operation of our devices when handled according to the limitations and information in that standard as well as to any limitations set forth in the information or standards referenced below.

Failure to adhere to the warnings or limitations as established by the listed specifications could result in reduced product performance, reduction of operable life, and/or reduction of overall reliability.

This product carries a Moisture Sensitivity Level (MSL) rating as shown below, and should be handled according to the requirements of the latest version of the joint industry standard IPC/JEDEC J-STD-033.

| Device | Moisture Sensitivity Level (MSL) Rating |
| :---: | :---: |
| CPC1002N | MSL 3 |

## ESD Sensitivity

This product is ESD Sensitive, and should be handled according to the industry standard JESD-625.

## Reflow Profile

This product has a maximum body temperature and time rating as shown below. All other guidelines of J-STD-020 must be observed.

| Device | Maximum Temperature x Time |
| :---: | :---: |
| CPC1002N | $260^{\circ} \mathrm{C}$ for 30 seconds |

## Board Wash

IXYS Integrated Circuits Division recommends the use of no-clean flux formulations. However, board washing to remove flux residue is acceptable. Since IXYS Integrated Circuits Division employs the use of silicone coating as an optical waveguide in many of its optically isolated products, the use of a short drying bake could be necessary if a wash is used after solder reflow processes. Chlorine- or Fluorine-based solvents or fluxes should not be used. Cleaning methods that employ ultrasonic energy should not be used.
