# 10-Ω QUAD SPDT ANALOG SWITCH

Check for Samples: TS3A5018

## FEATURES

- **Low ON-State Resistance (10 Ω)**
- **Low Charge Injection**
- **Excellent ON-State Resistance Matching**
- **Low Total Harmonic Distortion (THD)**
- **1.8-V to 3.6-V Single-Supply Operation**
- **Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II**
- **ESD Performance Tested Per JESD 22**
  - **2000-V Human-Body Model (A114-B, Class II)**
  - **1000-V Charged-Device Model (C101)**

APPLICATIONS

- **Sample-and-Hold Circuits**
- **Battery-Powered Equipment**
- **Audio and Video Signal Routing**
- **Communication Circuits**

D, DBQ, DGV, OR PW PACKAGE (TOP VIEW)

RGY PACKAGE (TOP VIEW)
RSV PACKAGE (TOP VIEW)
DESCRIPTION

The TS3A5018 is a quad single-pole double-throw (SPDT) analog switch that is designed to operate from 1.8 V to 3.6 V. This device can handle both digital and analog signals, and signals up to V_+ can be transmitted in either direction.

ORDERING INFORMATION[1]

T_A	PACKAGE[2]		ORDERABLE PART NUMBER	TOP-SIDE MARKING
−40°C to 85°C	SOIC – D	Tube of 40	TS3A5018D	TS3A5018
		Reel of 2500	TS3A5018DR	
	SSOP (QSOP) – DBQ	Reel of 2500	TS3A5018DBQR	YA018
	TSSOP – PW	Tube of 90	TS3A5018PW	YA018
		Reel of 2000	TS3A5018PWR	
	TVSOP – DGV	Reel of 2000	TS3A5018DGVR	YA018
	QFN – RGY	Reel of 3000	TS3A5018RGYR	YA018
			TS3A5018RGYRG4	
	uQFN – RSV	Reel of 3000	TS3A5018RSVR	ZUN

(1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI web site at www.ti.com.
(2) Package drawings, thermal data, and symbolization are available at www.ti.com/packaging.

SUMMARY OF CHARACTERISTICS[1]

Configuration	Quad Single-Pole, Double Throw (4 × SPDT)
Number of channels	4
ON-state resistance (r_{on})	7 Ω
ON-state resistance match (Δr_{on})	0.3 Ω
ON-state resistance flatness ($r_{on(flat)}$)	5 Ω
Turn-on/turn-off time (t_{ON}/t_{OFF})	3.5 ns/2 ns
Charge injection (Q_C)	2 pC
Bandwidth (BW)	300 MHz
OFF isolation (O_{ISO})	−48 dB at 10 MHz
Crosstalk (X_{TALK})	−48 dB at 10 MHz
Total harmonic distortion (THD)	0.2%
Leakage current ($I_{COM(OFF)}$)	±5 µA
Power-supply current (I_+)	2.5 µA
Package options	16-pin QFN, uQFN, SOIC, SSOP, TSSOP, or TVSOP

(1) V_+ = 1.65 V ~ 1.95 V, T_A = 25°C

FUNCTION TABLE

$\overline{EN}$	IN	NO TO COM, COM TO NO	NC TO COM, COM TO NC
L	L	OFF	ON
L	H	ON	OFF
H	X	OFF	OFF

Absolute Minimum and Maximum Ratings[1] [2]

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V_+	Supply voltage range[3]		−0.5	4.6	V
V_{NC} V_{NO} V_{COM}	Analog voltage range[3] [4]		−0.5	4.6	V
I_K	Analog port diode current	V_{NC}, V_{NO}, V_{COM} < 0	−50		mA
I_{NC} I_{NO} I_{COM}	On-state switch current	V_{NC}, V_{NO}, V_{COM} = 0 to 7 V	−64	64	mA
V_I	Digital input voltage range[3] [4]		−0.5	4.6	V
I_{IK}	Digital input clamp current	V_I < 0	−50		mA
I_+	Continuous current through V_+		−100	100	mA
I_{GND}	Continuous current through GND		−100	100	mA
$θ_{JA}$	Package thermal impedance[5]	D package		73	°C/W
		DBQ package		90	
		DGV package		120	
		PW package		108	
		RGY package		51	
		RSV package		184	
T_{stg}	Storage temperature range		−65	150	°C

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum
(3) All voltages are with respect to ground, unless otherwise specified.
(4) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
(5) The package thermal impedance is calculated in accordance with JESD 51-7.

Electrical Characteristics for 3.3-V Supply[1]

V_+ = 3 V to 3.6 V, T_A = −40°C to 85°C (unless otherwise noted)

PARAMETER	SYMBOL	TEST CONDITIONS		T_A	V_+	MIN	TYP	MAX	UNIT
Analog Switch									
Analog signal range	V_{COM}, V_{NO}, V_{NC}					0		V_+	V
ON-state resistance	r_{on}	$0 \le (V_{NC}$ or $V_{NO}) \le V_+$, I_{COM} = −32 mA,	Switch ON, See Figure 19	25°C	3 V		7	10	Ω
				Full				12	
ON-state resistance match between channels	Δr_{on}	V_{NC} or V_{NO} = 2.1 V, I_{COM} = −32 mA,	Switch ON, See Figure 19	25°C	3 V		0.3	0.8	Ω
				Full				1	
ON-state resistance flatness	$r_{on(flat)}$	$0 \le (V_{NC}$ or $V_{NO}) \le V_+$, I_{COM} = −32 mA,	Switch ON, See Figure 19	25°C	3 V		5	7	Ω
				Full				8	
NC, NO OFF leakage current	$I_{NC(OFF)}$, $I_{NO(OFF)}$	V_{NC} or V_{NO} = 1 V, V_{COM} = 3 V, or V_{NC} or V_{NO} = 3 V, V_{COM} = 1 V,	Switch OFF, See Figure 20	25°C	3.6 V	−0.1	0.05	0.1	µA
				Full		−0.2		0.2	
		V_{NC} or V_{NO} = 0 to 3.6 V, V_{COM} = 3.6 V to 0, or V_{NC} or V_{NO} = 3.6 to 0, V_{COM} = 0 to 3.6 V,	Switch OFF, See Figure 20	25°C	0 V	−2	0.05	2	
				Full		−10		10	
COM OFF leakage current	$I_{COM(OFF)}$	V_{COM} = 1 V, V_{NC} or V_{NO} = 3 V, or V_{COM} = 3 V, V_{NC} or V_{NO} = 3 V,	Switch OFF, See Figure 20	25°C	3.6 V	−0.1	0.05	0.1	µA
				Full		−0.2		0.2	
		V_{COM} = 0 to 3.6 V, V_{NC} or V_{NO} = 3.6 V to 0, or V_{COM} = 3.6 V to 0, V_{NC} or V_{NO} = 0 to 3.6 V,	Switch OFF, See Figure 20	25°C	0 V	−2	0.05	2	
				Full		−10		10	
NC, NO ON leakage current	$I_{NC(ON)}$, $I_{NO(ON)}$	V_{NC} or V_{NO} = 1 V, V_{COM} = Open, or V_{NC} or V_{NO} = 3 V, V_{COM} = Open,	Switch ON, See Figure 21	25°C	3.6 V	−0.1	0.05	0.1	µA
				Full		−0.2		0.2	
COM ON leakage current	$I_{COM(ON)}$	V_{COM} = 1 V, V_{NC} or V_{NO} = Open, or V_{COM} = 3 V, V_{NC} or V_{NO} = Open,	Switch ON, See Figure 21	25°C	3.6 V	−0.1	0.05	0.1	µA
				Full		−0.2		0.2	
Digital Control Inputs (IN, $\overline{EN}$)[2]									
Input logic high	V_{IH}			Full		2		V_+	V
Input logic low	V_{IL}			Full		0		0.8	V
Input leakage current	I_{IH}, I_{IL}	$V_I = V_+$ or 0		25°C	3.6 V	−1	0.05	1	µA
				Full		−1		1	

(1) The algebraic convention is used in this data sheet; the most negative value is shown in the minimum column.
(2) All unused digital inputs of the device must be held at V_+ or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, literature number SCBA004.

PIN DESCRIPTION

PIN NO.	NAME	DESCRIPTION
1	IN	Digital control pin to select between NC and NO
2	NC1	Normally closed
3	NO1	Normally open
4	COM1	Common
5	NC2	Normally closed
6	NO2	Normally open
7	COM2	Common
8	GND	Digital ground
9	COM3	Common
10	NO3	Normally open
11	NC3	Normally closed

PIN DESCRIPTION (continued)

PIN NO.	NAME	DESCRIPTION
12	COM4	Common
13	NO4	Normally open
14	NC4	Normally closed
15	$\overline{EN}$	Chip enable (active low)
16	V$_+$	Power supply

Product Folder Links: *TS3A5018*

PARAMETER DESCRIPTION

SYMBOL	DESCRIPTION
V_{COM}	Voltage at COM
V_{NC}	Voltage at NC
V_{NO}	Voltage at NO
r_{on}	Resistance between COM and NC or NO ports when the channel is ON
Δr_{on}	Difference of r_{on} between channels in a specific device
$r_{on(flat)}$	Difference between the maximum and minimum value of r_{on} in a channel over the specified range of conditions
$I_{NC(OFF)}$	Leakage current measured at the NC port, with the corresponding channel (NC to COM) in the OFF state
$I_{NC(ON)}$	Leakage current measured at the NC port, with the corresponding channel (NC to COM) in the ON state and the output (COM) open
$I_{NO(OFF)}$	Leakage current measured at the NO port, with the corresponding channel (NO to COM) in the OFF state
$I_{NO(ON)}$	Leakage current measured at the NO port, with the corresponding channel (NO to COM) in the ON state and the output (COM) open
$I_{COM(OFF)}$	Leakage current measured at the COM port, with the corresponding channel (COM to NC or NO) in the OFF state
$I_{COM(ON)}$	Leakage current measured at the COM port, with the corresponding channel (COM to NC or NO) in the ON state and the output (NC or NO) open
V_{IH}	Minimum input voltage for logic high for the control input (IN, $\overline{EN}$)
V_{IL}	Maximum input voltage for logic low for the control input (IN, $\overline{EN}$)
V_I	Voltage at the control input (IN, $\overline{EN}$)
I_{IH}, I_{IL}	Leakage current measured at the control input (IN, $\overline{EN}$)
t_{ON}	Turn-on time for the switch. This parameter is measured under the specified range of conditions and by the propagation delay between the digital control (IN) signal and analog output NC or NO) signal when the switch is turning ON.
t_{OFF}	Turn-off time for the switch. This parameter is measured under the specified range of conditions and by the propagation delay between the digital control (IN) signal and analog output (NC or NO) signal when the switch is turning OFF.
Q_C	Charge injection is a measurement of unwanted signal coupling from the control (IN) input to the analog (NC or NO) output. This is measured in coulomb (C) and measured by the total charge induced due to switching of the control input. Charge injection, $Q_C = C_L \times \Delta V_{COM}$, C_L is the load capacitance and ΔV_{COM} is the change in analog output voltage.
$C_{NC(OFF)}$	Capacitance at the NC port when the corresponding channel (NC to COM) is OFF
$C_{NC(ON)}$	Capacitance at the NC port when the corresponding channel (NC to COM) is ON
$C_{NO(OFF)}$	Capacitance at the NC port when the corresponding channel (NO to COM) is OFF
$C_{NO(ON)}$	Capacitance at the NC port when the corresponding channel (NO to COM) is ON
$C_{COM(OFF)}$	Capacitance at the COM port when the corresponding channel (COM to NC) is OFF
$C_{COM(ON)}$	Capacitance at the COM port when the corresponding channel (COM to NC) is ON
C_I	Capacitance of control input (IN, $\overline{EN}$)
O_{ISO}	OFF isolation of the switch is a measurement of OFF-state switch impedance. This is measured in dB in a specific frequency, with the corresponding channel (NC to COM) in the OFF state.
X_{TALK}	Crosstalk is a measurement of unwanted signal coupling from an ON channel to an OFF channel (NC1 to NO1). Adjacent crosstalk is a measure of unwanted signal coupling from an ON channel to an adjacent ON channel (NC1 to NC2) .This is measured in a specific frequency and in dB.
BW	Bandwidth of the switch. This is the frequency in which the gain of an ON channel is –3 dB below the DC gain.
THD	Total harmonic distortion describes the signal distortion caused by the analog switch. This is defined as the ratio of root mean square (RMS) value of the second, third, and higher harmonic to the absolute magnitude of the fundamental harmonic.
I_+	Static power-supply current with the control (IN) pin at V_+ or GND

PARAMETER MEASUREMENT INFORMATION

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

RGY (R−PVQFN−N16)   PLASTIC QUAD FLATPACK NO−LEAD

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No−Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

NOTES: A.   All linear dimensions are in millimeters.   Dimensioning and tolerancing per ASME Y14.5M−1994.
         B.   This drawing is subject to change without notice.
         C.   QFN (Quad Flatpack No−Lead) package configuration.
         D.   This package complies to JEDEC MO−288 variation UFHE, except minimum package thickness.

NOTES: A. All linear dimensions are in millimeters.
        B. This drawing is subject to change without notice.
        C. Publication IPC−7351 is recommended for alternate designs.
        D. Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.
        E. Maximum stencil thickness 0,127 mm (5 mils). All linear dimensions are in millimeters.
        F. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should
            contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
        G. Side aperture dimensions over−print land for acceptable area ratio > 0.66. Customer may reduce side aperture dimensions
            if stencil manufacturing process allows for sufficient release at smaller opening.

NOTES: A. All linear dimensions are in millimeters.
          B. This drawing is subject to change without notice.
          C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
          D. Publication IPC–7351 is recommended for alternate designs.
          E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should
              contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric
              metal load solder paste. Refer to IPC–7525 for other stencil recommendations.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have *not* been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
